

Pets Require More Than Processed Foods!

Doesn't your pet deserve to feel good everyday? Whether young or old, all pets need more than processed food to feel their best. They need a daily source of 'live' food enzymes. If you are feeding your pet one of today's popular processed pet foods, then chances are, your pet's body is depleted of the primary enzyme precursors nature provides abundantly in all living foods.

NZYMES® Antioxidant Treats provide pets with an enzyme-rich food source plus powerful antioxidant protection. The 'live' ingredients give the perfect added nutrition needed for a long and vital life and the quality building blocks a pet's body needs to cleanse toxins and free radicals from soft tissues to restore the normal healthy functioning of the immune system.

We're so sure that **NZYMES®** will help your pet within 30 days that we offer you an unconditional money-back guarantee. Just open this brochure and read our success stories and you will see for yourself what giving **NZYMES®** everyday can do for your loving pet.

Enzymes make all life possible. They are needed for each and every chemical reaction occurring in the body over the course of a lifetime. Without them, no metabolic activity would take place at all. Neither vitamins, minerals, nor hormones can function without enzymes.

The Main Reason for a Pet's Poor Health

A famous pet-nutritional study by Dr. Francis M. Pottenger demonstrated that a 'life-long diet' of pre-processed or cooked foods as the main reason why animals develop chronic degenerative diseases, infections and other maladies. His decade-long study confirmed that the succeeding generations who remain on this type of enzyme-less diet will show progressively more illness and disease.

Even the best commercial pet foods have their enzymes destroyed through heat, processing, preservatives and other chemicals. These vital food enzymes are needed to strengthen a pet's immune system and protect all of their body's primary metabolic functions.

The fact that we continue to feed our pets such enzyme-less food over an entire lifetime only contributes to the growing list of animal health problems we are witnessing today including; **Osteoarthritis, Inflammation, Joint Pain, Hip Dysplasia, Pano, OCD, HOD,**

Shedding, Hair loss, Dry Skin, Itchy Skin, Digestive Disorders, Gastritis, Pet Food Allergies, Epilepsy, Fatigue, Hot Spots and many other stress related symptoms.

Proven with Veterinarians

The powerful 'antioxidant formula' found in **NZYMES®** has been used by veterinarians for over fifteen years to help maintain mobility and vitality in pets of all ages.

Musculoskeletal Inflammation Study

Musculoskeletal inflammation is a primary cause of discomfort for millions of older pets. A study of this unique formula's effects on musculoskeletal inflammation in dogs was performed by a group of six (6) contributing veterinarians. The 387 dogs tested ranged in size from 10 to 125 pounds and in ages from 6 months to 18 years.

The Study's Findings

In just 8 days, 88% percent of the cases showed significant improvement in mobility, range of motion, relief of pain and reduction of swelling. 12% percent of the dogs did not show significant improvement until the fourth week of treatment. The overall mobility for all the dogs tested increased as treatment time extended past the initial response point.

In most cases, the equivalent of one **NZYMES®** tablet for each 60 lbs. of body weight was used to achieve this positive response.

SHANA
Breed: German Shepherd mix
Age: 12 1/2 years
Problems: Stroke - Arthritis - Cyst

Shana had a stroke in December of 1999 that left her with her head tilted to the side. She had lost her appetite, her eyes were dull and she was very listless. Her hindquarters were so weak, shaky with painful arthritis that she couldn't even use the stairs without our help.

Then, a bloody cyst opened on her spine my vet considered cancerous. She fed Shana intravenously but decided against surgery because she did not feel Shana could survive the anesthesia in her weakened condition. Based on all of these overwhelming symptoms, the vet felt that Shana would pass away very soon. I couldn't accept this prognosis and starting looking on the Internet for more help.

I found the **Nzymes**® site, read the testimonials and decided to place an order at the end of January. Even though the initial dosage called for 2 each day for the first two weeks, I only gave Shana one (1) **Nzymes**® per day. After several days I noticed she seemed to have more energy and a will to live. Day by day I noticed little improvements. Her eyes got shiny, her cyst started to heal, her appetite increased and she seemed to enjoy life again.

Now, after 30 days on **Nzymes**®, she can go up and down the stairs without our help, and she's walking over a mile a day. Plus she has a spring in her step that I haven't seen in quite awhile. Remember she could barely raise herself only a month ago. The symptoms of the stroke have totally disappeared and the terrible cyst on her back is almost completely healed. I know this story sounds too good to be true, I promise you, every word is true. I'm so thankful to have Shana alive and well.

ATHENA
Breed: Greyhound
Age: 5 years
Problems: Urinary Problems - Dry skin - Inactive

Since we adopted our 5 year old brindle Greyhound from the racetrack 2 years ago we have accumulated an astronomical amount of veterinarian bills due to her reoccurring urinary problems. She also has a dry skin problem.

Our veterinarian had said, that she eats good quality dry dog food and all the nutrients that she needs should be available in her food. But, after researching the importance of enzymes and their positive effects for animal's bodies we decided to try your **Nzymes**® product.

Well, we were hoping that **Nzymes**® would work... and they have! Before, Athena was inactive, she just laid around the house and we felt bad for her. Over the past month she has shown significant health improvements and we noticed the following changes; She has more energy, and she now licks us with kisses. She is more active and even enjoys running around our house. Her dry flaky skin began to look much better after 30 days. She has even re-grown hair on her hindquarters (that alone was worth it).

Just recently we took her back to the veterinarian for a new urinalysis test and this time everything was normal, NO crystals in her urine. We were amazed to have obtained a normal urinalysis in less than two months on **Nzymes**®. Her eating habits have improved and her stool seems to have better quality (easier for pick up). Thanks to **Nzymes**® we avoided the additional cost to see a dermatologist and now hope that our future visits to the veterinarian will only be for routine care or emergencies.

Thanks for initially easing our worries about the product. Athena is just like our kid and we want the best for her. We have recommended **Nzymes**® to several of our friends who have pets.

Karen & Michael Domenech - Webster, NY

TIFFY
Breed: Domestic Long Hair
Age: 10 years.
Problems: - Shedding - Hair balls - Lazy - Lethargic

Tiffany is 10 and had become very lethargic. She was acting as if she was ill, but the vet couldn't find anything wrong. At night she always likes to lay on our very expensive royal blue carpet and she sheds cat hair everywhere. Of course, every morning I would have to take a half-hour to clean up the shedding and the coughed-up furr balls.

So I was just about to go nuts when a friend who had used your **Nzymes**® for their cat suggested I give them a try. We followed the instructions and started giving her one **Nzymes**® tablet broken up and mixed with a little tuna everyday.

After 3 weeks Tiffany's like new cat. She has renewed energy and seems very happy and playful again. What amazed me was that her shedding has stopped and she rarely gets hair balls anymore. Your product has given me back that half-hour a day I dreaded so much. I want you to know that, besides Tiffany's improvement, I consider my life improved too. You need to tell more cat owners about **Nzymes**®.

M. Coats - San Pedro, CA

RALF
Breed: Miniature Schnauzer
Age: 1.5 years
Problem: Poisoning – Intestinal hemorrhaging Diarrhea - Vomiting - Poor Appetite

My 1 1/2 yr. old Miniature Schnauzer, Ralf, ate some grass contaminated with rat poison in January, 1999. This caused severe gastrointestinal hemorrhage and scarring of the intestinal mucous. Luckily, being treated in time, he survived. Nevertheless, 30 days later he still was in a weakened condition, feces full of mucous and adverse reactions to processed foods, even including therapeutic intestinal foods.

Navigating on the Internet, looking for something that could eventually help Ralf, I found the **Nzymes**®. He began to taking them in March and within 20 days there was a notable improvement. He had normal bowel movements; his appetite, happiness and energy reappeared; His diarrhea and vomiting stopped. Now, after 2 months eating 1 treat daily, his friskiness and health are perfect.

I have recommended **Nzymes**® to all my friends and I intend to give them to Ralf for the rest of his life. I would like to thank you from the bottom of my heart for this product. **Nzymes**® returned my Ralf to his old happy, frisky, healthy self.

Isabel Cristina Bolduan - Curitiba, Brazil

ADA & CHLOE
Breed: Golden Retrievers
Problems: Itchy skin - Pulling hair out

Ada and Chloe have been taking **Nzymes**® for three months. I am happy to report that their skin disorders began to disappear after only 2 weeks on the product.

Before the use of **Nzymes**®, they would constantly lick and pull-out their hair and create open sores on different spots on their bodies. Our veterinarian said they were having allergic reactions to the environment (e.g. toxins, etc.) **Nzymes**® impressed us with its abilities to cleanse these the toxins from their bodies.

I have taken both of them off the Atarax medication our veterinarian prescribed and now give them just one **Nzymes**® treat per day each. I just shake the bottle and they come running. Their skin conditions have cleared up and there have been NO new sores in three months.

Nzymes® will be part of their daily routine for the rest of their lives. They have made my dogs more comfortable and now they have a better quality of life.
