

Vaporizer Use of OX-E-DROPS with Respiratory Conditions

- Pneumonia
- Kennel Cough
- Dog or Cat Flu
- Congestion
- Asthma

- Breathing Disorders
- Sneezing/Wheezing
- Bronchitis
- Bacterial/Viral Infection
- Cold Symptoms

IMPORTANT NOTE: **Internal usage** of Ox-E-Drops concentrate should be increased to 3 times daily during this illness. The formula = 1-Drop per 20lb of body weight, diluted in water (usually a teaspoon, or several CC's in a syringe).

PREPARING THE MIX OF OX-E SOLUTION FOR VAPOR-INHALANT USE:

USING A VAPORIZER: Mix 40 to 80 drops of Ox-E-Drops Concentrate with the one (1) gallon of water in a vaporizer. **NOTE:** Severity of the issue determines the drop count to add; severe pneumonia may warrant up to 80 drops, whereas sneezing may only warrant 40 drops or less.

USING A NEBULIZER: Mix 6-8 DROPS of Ox-E-Drops Concentrate with each OUNCE of water for use in the nebulizer reservoir. For devices which use a small 'multi-CC' reservoir, obtain a common 2oz. plastic bottle from your local store; in this, mix a supply for use in the reservoir (12-16 drops per 2-oz of water).

NOTE: For more resistant cases, increasing concentration (10 drops per OZ.) may be necessary.

CHOOSING A VAPOR INHALANT METHOD:

Directions for People:

- **Option A:** Place the vaporizer on the night-stand next to your side the bed and breathe the vapors overnight.
- **Option B:** Use a towel as a tent over the head with a steaming pan of water, steam-pot, or Neti-Pot. The vapors should be inhaled into the lungs for 15 min. per hour and repeated each hour for 4-5 hours for a period of 2 to 3 days. **NOTE:** Use the 2% Ox-E-Drops solution in a nasal sprayer for sinuses.

Directions for Pets:

For either METHOD, allow the pet to breath the vapors for 15-20 minutes of EACH HOUR for a period of 4-5 hours. **Repeat** for 2-3 days.

- **Vaporizer:** Place the pet in an enclosed area like a small bathroom or kennel along with the vaporizer. With a kennel, use a towel or sheet to tent the top to make sure the vapors are directed so the pet can breathe them (avoid hot steam near their nose or face).
- **Nebulizer:** Follow the instructions for your device using the solution you mixed per instructions above.
